

GFI PCI Suite

Event log management & network vulnerability management for PCI compliance

The GFI PCI Suite is a package comprising the core software required for PCI DSS compliance: GFI EventsManager for event log management and GFI LANguard Network Security Scanner (N.S.S.) for network vulnerability scanning, patch management and network auditing. The GFI PCI Suite also features enhanced reporting functionality with reports created specifically to help your organization become compliant.

GFI EventsManager automates event log management enabling administrators to keep track of events generated network-wide from all devices that use Windows event logs, W3C, and Syslog. Event log management is time consuming unless administrators have a solution such as GFI EventsManager that categorizes events by severity and issues alerts on critical events. It provides additional benefits in event auditing and makes it easier to browse events and conduct forensic analysis. As data logging is a key PCI DSS requirement, GFI EventsManager is the tool you need to become compliant.

GFI LANguard N.S.S. is a network vulnerability management solution that scans your network IP by IP, identifies all possible security threats, fixes vulnerabilities and manages missing patches. To achieve PCI DSS compliance organizations must maintain secure systems and applications as well as ensure that their network is scanned for vulnerabilities that may compromise a network's security. GFI LANguard N.S.S. provides organizations with the tools they need to gauge the effectiveness of their PCI DSS compliance efforts.

GFI EventsManager features

Thousands of events are generated by operating systems, applications, databases and devices. Keeping track of these events, or events log management, is time-consuming unless you have a solution that automatically categorizes events by severity and alerts you on critical events. Data logging is key to meeting PCI DSS requirements since logs provide audit trails of all activities in a credit card holder data environment and hence, a comprehensive log management system would provide you with the functionality you need to help you become PCI DSS compliant.

■ Prepare specialized reports required for PCI DSS compliance

Reports accompanying the GFI PCI Suite have been designed to present information in the format specified by PCI DSS requirement 10.3. Using the GFI EventsManager reporter as part of the GFI PCI Suite, you can create or customize reports including standard reports such as:

- Access to all audit trails
- Invalid access attempts
- Initialization of audit logs
- Identification and authentication reports
- And more!

■ A Swiss knife to meet different corporate requirements

GFI EventsManager helps your organization to address the following 4 areas:

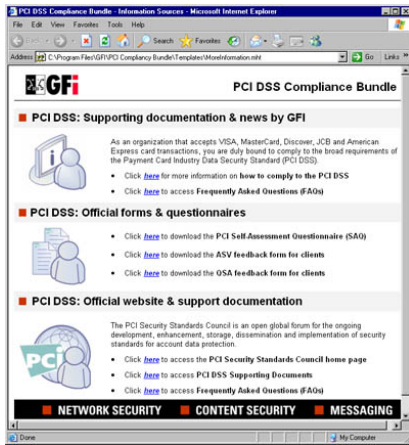

- Information system and network security: Detect intruders and security breaches
- System health monitoring: Proactively monitor your servers
- Legal and regulatory compliance: An aid to meet regulatory compliance
- Forensic investigations: A reference point when something goes wrong.

Benefits

Why use the GFI PCI Suite?

- A single package to help you meet PCI DSS compliance
- Event log and network vulnerability management in a single solution
- Ships with specialised PCI DSS compliance reports
- Configuration has been purposely designed to install the features required for PCI DSS compliance
- Automated 24/7 event and network activity monitoring and alerting.

GFI LANguard N.S.S. features

GFI LANguard Network Security Scanner is a complete network vulnerability management solution that scans your network IP by IP and proactively identifies vulnerabilities before these are exploited by malicious users. GFI LANguard N.S.S. scans the entire network, performs over 15,000 vulnerability assessments, identifies all possible security threats and provides the tools you need to remediate many of the vulnerabilities and manage missing patches. An excellent ReportPack add-on provides extensive reporting functionality and along with GFI LANguard N.S.S. makes up the essential, cost-effective solution that businesses need to safeguard their networks and gauge the effectiveness of their PCI compliance program.

■ Prepare specialized reports required for PCI DSS compliance

Reports accompanying the GFI PCI Suite have been designed to present information in the format specified by PCI DSS requirement 10.3. Using the GFI LANguard N.S.S. reporter as part of the GFI PCI Suite, you can create or customize reports including standard reports such as:

- Anti-virus program status
- Password audit policies

■ Ensures that third party security applications such as anti-virus and anti-spyware offer optimum protection

GFI LANguard N.S.S. also checks that supported security applications such as anti-virus and anti-spyware software are updated with the latest definition files and are functioning correctly. For example, you can ensure that supported security applications have all key features (such as real-time scanning) enabled.

System requirements

GFI EventsManager system requirements

- .NET framework 2.0
- Microsoft Data Access Components (MDAC) 2.6 or later
- Access to MSDE / SQL Server 2000 or later

GFI LANguard N.S.S. system requirements

- Windows 2000 (SP4), XP (SP2), 2003, VISTA operating system
- Internet Explorer 5.1 or higher
- Client for Microsoft Networks component – included by default in Windows 95 or higher
- Secure Shell (SSH) – this is included by default in every Linux OS distribution pack.
